MOBILE ACCESS READER

Compliant with all access control systems, the Architect® Blue vandal proof reader identifies mobile phones thanks to many Prox or handsfree identification modes. It can work alongside or replace traditional RFID access cards.

WELCOME TO HIGH SECURITY

The reader uses the latest MIFARE® DESFire® EV2 contactless chip technologies with new data security mechanisms:

- **Secure Messaging EV2:** secure transaction method based on AES-128 with protection against interleaving and replay attacks.

- **Proximity Check:** improved protection against relay attacks.

All public encryption algorithms can be used (3DES, AES, RSA, SHA, etc.), and it uses an EAL5+ crypto processor to improve data protection and privacy.

INSTINCTIVE ACCESS CONTROL

Your smartphone becomes your access key by eliminating the constraints of traditional access control. Choose your favorite identification mode and make your access options both secure and much more instinctive!

Card Mode
Place your smartphone in front of the reader as a standard card.

Slide Mode
Your smartphone turns your hand into a badge you have with you at all times.

Remote Mode
Activate remote control mode to remotely check your access points.

Tap Tap Mode
Tap your smartphone twice in your pocket for close or remote access.

Hands-free Mode
Just walk past the reader! There's nothing else to it!

CREATE YOUR OWN SCALABLE CONFIGURATION

The Architect® Blue reader can be tailored to your needs, ensuring that all functionalities and security levels can be upgraded across all your readers. The modularity concept allows you to take the 125 kHz module out at the end of your technological migration and / or to implement new functions: keypad or touchscreen.

STANDING THE TEST OF TIME

The Architect® Blue reader design has been developed to withstand harsh environments, to operate outside (IP65 level) and to offer a high vandal proof resistance (IK10 certified).
